512 GW Townhouse Named Awardee of 2020 Rethinking The Future Global Architecture and Design Award

We're pleased to share that our recently completed project [512 GW Townhouse](#) has been recognized by the 2020 Rethinking The Future Global Architecture and Design Awards. Rethinking The Future is an international awards program, which focuses on **innovation and sustainability**. In its residential category, it recognizes the best residential projects that provide a comfortable living environment for residents in their respective climates.

512 GW Townhouse project added a large extension to a converted former 4-story industrial building to create a comfortable, 8-story one family residence wrapped in a smart "climate skin," an openable trellis volume that generates generous outdoor balconies & terraces, moderates the climate, and creates privacy for its inhabitants.
